DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Aaron Deditch (Registration No. 33,865) on September 19, 2008.

The application has been amended as follows:

In The Claims

Claim 19, in line 9, "data of the SDH" has been replaced with --data to the SDH--.

26. (Currently Amended) The ~~transmission device circuit~~ circuit as claimed in claim 24, wherein the packets are IP packets which are used for realizing a communication by the Internet Protocol.
27. (Currently Amended) A transmission device comprising[[:]];
a first circuit; and
a second circuit, wherein the first circuit converts first packets into a first STM signal in SDH, ~~and the second circuits convert a second STM signal in SDH~~, and the second circuit[[s]] converts a second STM signal in SDH into second packets to be sent at irregular intervals;
wherein the first circuit includes:

a buffering unit configured to perform a first buffering process for the first packets arriving at irregular intervals to convert the first packets into a plurality of first data streams,

a mapping unit configured to map the first data streams into a first SDH section payload without adding any SDH path overhead,

a generating unit configured to generate the first STM signal by adding at least one overhead to data of the first SDH section payload, and

a sending unit configured to send the first STM signal; and

wherein the second circuit includes:

a separating unit configured to separate at least one overhead from data of a second SDH section payload in the second STM signal,

a second buffering unit configured to perform a second buffering process for the data of the second SDH section payload to generate second data streams, and

an extracting unit configured to extract the second packets from the second data streams by using at least one data link layer process.

Claim 32, in line 5, “the second circuits convert” has been replaced with --the second circuit converts--. Further, in line 14, “to-data” has been replaced with --to data--.

35. (Currently Amended) A method for converting packets into an STM signal in SDH transmission, to be implemented in a transmission device for transmitting the packets, the method comprising:

performing a buffering process for the packets arriving at irregular intervals to convert the packets into a plurality of data streams;

mapping the data streams into an SDH section payload without adding any SDH path overhead; and

generating the STM signal by adding at least one overhead to data of the SDH section payload.

36. (Currently Amended) A method for converting an STM signal in SDH transmission into packets, to be implemented in a transmission device for transmitting the packets, the method comprising:

separating at least one overhead from data of an SDH section payload, in which no SDH path overhead is included, in the STM signal;

performing a buffering process for the data of the SDH section payload to generate data streams; and

extracting the packets sent at irregular intervals from the data streams by using at least one data link layer process.

Allowable Subject Matter

2. Claims 19-20, 24, 26-27, 29, 32, and 34-36 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest mapping the data streams into an SDH section payload without adding any SDH path overhead, as specified in independent claims 19, 27, 32, and 35.

The prior art does not teach or fairly suggest separating at least one overhead from data of an SDH section payload in which no SDH path overhead is included, as specified in independent claims 24 and 36.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Okamoto et al (US Patent 6,731,876 B1) discloses packet transmission device and packet transmission system.
